1. Hero Section

Need an AI-expert for your business? No you don´t.

With ONE AI you are the AI-expert. Now. Our tool is the solution for: Every task. Every hardware. Every industry. Tailored AI. Instantly.

(changing words after “everry” -> Nr 27 https://alvarotrigo.com/blog/css-text-animations/).

With ONE WARE Studio and the ONE AI extension it is possible to upgrade even existing Systems with AIs, customized for your hardware and application – instantly, fully automatic, highly efficient, without any expert knowledge. This is made possible by our globally unique method for the automatic generation of neural network architectures.

ONE AI (Button)

Whatever the task, whatever the hardware – ONE AI adapts.

Our Vision

„Our goal is a world where every developer can generate exactly the AI they need – in seconds." - ONE WARE

We believe that no one should rely on universal AI that doesn't fit. That's why we're enabling customized AI – faster, more efficiently, and more sustainably than ever before. For everyone.

- No perfomance compromise
- No data science team needed
- Lowers the acces barriers of AI

ONE WARE stands for:

In comparison ONE AI on Max 10 FPGA (2014) is the superior alternative to traditional AI on a Jetson Nano (2019) – faster, more efficient, fully automated, and optimized for any hardware and any application. It's the most advanced AI solution on the market:

- **11,600 % faster (inference)**
  0.086 ms latency on FPGA vs. 10 ms on Jetson Nano
- **Over 1,000× more resource-efficient**
  < 1 W power consumption vs. up to 10 W on conventional GPUs
- **99.5 % accuracy**
  Tailored neural networks for high-precision defect detection
- **100 % automated AI generation**
  From dataset to deployable model – no AI expertise required
- **Optimized for your hardware**
  Seamless integration into existing systems, no rework needed

Check the Facts yourself (Button refeering to Whitepaper)

This say others about us:

"Working with ONE WARE demonstrates the incredible potential that emerges when intelligent AI development meets highly efficient FPGA technology. ONE WARE takes our MAX® 10 platform to a new level – delivering solutions that not only push technological boundaries, together we're building solutions that are far more precise, more efficient and drive meaningful change in industrial practice. This partnership represents a new generation of industrial AI: scalable, resource-efficient, and universally applicable."

– Mark Moran, Director of Boards, Development Kits, and Partners at Altera

"From day one, working with ONE WARE was pragmatic and focused. Using AI-powered image processing, we established a robust defect detection system on high-gloss surfaces in just a few weeks – a milestone that traditional metrology would have taken up to 18 months to reach. We're enthusiastic about ONE WARE's solution. Its potential in AI is impressive and a true lever for strengthening our competitiveness."

– Christian Leon, COO & Managing Director at HDO

"Through our European Digital Infrastructure investment thesis, we seek out entrepreneurs building the foundations of future global digital systems. ONE WARE is such a company. With its mission to make advanced technologies more accessible and universally applicable, the team around Leon, Leo, Hendrik, and Ali is fundamentally changing the way AI and electronics development is approached across industries."

– Jan Sessenhausen, Investor & General Partner at Cusp Capital
